

THE PRODUCT

# Claritect turns one analytical chat into a reusable report contract.

The system captures not just the question, but the governed logic, assumptions, and rerun behavior needed to operate the report over time.

## Connect a governed source

Guide the user through source, governance, cataloging, and activation across Postgres, MySQL, Snowflake, and BigQuery.

## Scope once in chat

Break the report into atomic questions, ask clarifications, suggest useful follow-ups, and lock the final plan.

## Run, explain, and schedule

Generate the report, answer questions on it, build business cases, and save it as a recurring schedule.

**System of record:** report contract

**Primary output:** HTML + PDF report

**Recurring value:** deterministic scheduled reruns
