

Judgment and governance are deliberately split.

AI handles reasoning where nuance matters. Deterministic code handles risk where trust matters.

AI-powered layers

- Conversation orchestration and scoping
- Batch analysis and forecast analysis
- Report composition
- Report clarification
- Business case generation

Deterministic layers

- SELECT-only SQL enforcement
- Allowlist and schema checks
- Forced limits and evidence row cap
- Cron plus timezone scheduling
- Queueing, retries, and audit logging

Read-only customer access

Evidence row cap ≤ 200

Deterministic scheduling

Business-consumable output
